

Online Banking Features that Promote Security

We provide a number of additional security features in online banking to help protect you:

- **Timeout:** This prevents curious persons from continuing your online banking session if you leave your PC unattended without logging out. You may set the timeout period in online banking's User Options screen. We recommend that you always sign off (log out) when done banking online.
- **Online Statements:** Online statements are facsimiles of traditional financial statements packaged and delivered to you securely within Internet Banking. By eliminating your paper statement, you help stop thieves from stealing your information out of your mailbox.
- **Alerts:** Check clear alerts, payment alerts, and balance alerts are financial tools we provide to help you to monitor your accounts more actively and to detect suspicious activity more easily.
- **Digital Identity and Signature:** Members can establish a digital identity that will be verified by the Credit Union which allows them to receive and sign documents in a secure-encrypted and convenient environment.
